MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION
17 State House Station | Augusta, Maine 04333-0017
www.maine.gov/dep

I. Introduction

In January 2013, the Department of Environmental Protection (Department) submitted its broader, "Implementing Product Stewardship in Maine" report, which included updates on other product stewardship categories, as well as recommendations to create a more comprehensive framework law. As the information required for Maine's product stewardship program for mercury-added lamps was not available at that time, the Department is submitting for the first time this "Mercury-Added Lamps" report to comply with the directive found at 38 MRSA §1672(4)(D).

The law requires that beginning in 2013, and biennially thereafter, the Department submit to the joint standing committee of the Legislature having jurisdiction over natural resources matters, a report that contains calculations on the amount of mercury-added lamps recycled from households, any proposed modifications to the manufacturer recycling programs to improve recycling rates, and any statutory changes that are needed to facilitate mercury-added lamp collection and recycling.

II. Recycling Rate

The recycling rate for any product can be calculated by dividing the number (or weight) of product collected by the number (or weight) of product available for recycling. For 2012, the National Electrical Manufacturers Association (NEMA) estimates the number of household mercury-added lamps available for recycling in Maine based on the following factors:

- The average number of CFLs sold nationally in 2002, 2003, and 2004 (based on an average lifespan of 9 years for CFLs);
- The average number of linear fluorescent and High Intensity Discharge (HID) lamps sold into the residential market in 1996, 1997, and 1998 (based on an average lifespan of 15 years for linear fluorescents in household applications);
- Maine's percentage of the national population, i.e., 0.42%.

NEMA reports that 50,492 mercury-added lamps were recycled through its product stewardship program in Maine in 2012. Based on historic sales data, NEMA estimates that there were 708,889 residential mercury-added lamps available for recycling in Maine in 2012. Therefore, 7.1% of available lamps were collected and returned for recycling through the manufacturers' program in 2012.

In addition, the Department received manifests documenting the recycling of 155,159 household lamps from municipal waste collection sites. Taken together, this indicates a recycling rate of 29% (205,651/708,889) for household mercury-added lamps in Maine in 2012.

III. Other Performance Measures

Two factors critical to implementing an effective recycling program are the convenience of the collection system and consumer awareness of recycling opportunities. Convenience of collection has several facets, including in part: the opportunity to drop off (i.e., the hours the collection center

is open), the draw of the collection site (e.g., the consumer may visit the location for other reasons), and geographic proximity[1]. In contrast to municipal waste collection sites, retail locations serve anyone, and are usually open at least six days per week. In addition, consumers can access retail locations in conjunction with other errands they routinely run. Both these factors make retail locations highly convenient for consumers to utilize. By early 2013, 134 retail locations had joined the program, creating a network of collection sites that are readily available to all consumers. In its annual report on 2012 program activities, NEMA evaluated the geographic convenience of its collection system by mapping collection locations onto a population density map of Maine (see Appendix B). This exercise illustrated that the collection sites are generally well-distributed in relation to population centers, and helped identify areas to focus further collection site recruitment efforts.

38 M.R.S.A. §1672(4)(A)(3) requires the manufacturers to implement "Effective education and outreach, including, but not limited to, point-of-purchase signs and other materials provided to retail establishments without cost." To help meet this responsibility, NEMA developed a marketing campaign and materials utilizing the slogan "Reduce, Relight, Recycle" and in 2012 undertook several initiatives to raise consumer awareness of the need to, and opportunities for recycling mercury-added lamps. NEMA's marketing campaign included: print ads in magazines, Uncle Henry's, the *Weekly Forecaster* in southern and mid-coast Maine, and the *Bangor Daily New* and *Portland Press Herald*; distribution of a radio PSA to 95 area-specific radio stations; internet search purchases; and print and signage advertising at University of Maine Black Bear athletic events (Appendix E shows images of bookmarks, postcards and temporary tattoos available to supplement these efforts).

To date, there has been no evaluation of consumer awareness related to the manufacturers' mercury-added lamp recycling program in Maine. However, this type of evaluation of a similar program was previously done in Maine. In 2008 and again in 2010, Efficiency Maine conducted consumer awareness surveys to evaluate the marketing of their energy efficiency programs, including the use of compact fluorescent lamps (CFLs). These surveys included questions that evaluated Maine consumers' awareness of the opportunity to recycle CFLs at no cost at retail locations. Consumer awareness of this opportunity to recycle grew from 41% in 2008 to 54% in 2010, providing a measure of the effectiveness of Efficiency Maine's marketing campaign for CFLs, including CFL recycling.

IV. Overview of Program Implementation

On December 10, 2010 NEMA submitted a final revised plan to the Department on behalf of mercury-added lamp manufacturers for fulfilling the manufacturer responsibilities for product stewardship in 38 M.R.S.A. §1672(4), *Manufacturer recycling program for mercury-added lamps*. The Department approved the plan on December 17, 2010, and NEMA and the Department subsequently have coordinated activities to achieve a smooth implementation phase for the program.

By January 1, 2011 NEMA completed an RFP process resulting in a contract with Veolia Environmental Services (Veolia) to provide containers, shipping, and recycling all at no cost to

[1] Wagner, T.P. Examining the concept of convenient collection: An application to extended producer responsibility and product stewardship frameworks. Waste Management (2102), http://dx.doi.org/10.1016/j.wasman.2012.06.015

municipal and retail collection sites. Both NEMA and the Department sent written information to all retailers that had participated in the precursor Efficiency Maine CFL recycling program and to municipalities informing them of the opportunity to participate as collection sites in this new free household mercury-added lamp recycling program.

NEMA established the following process for starting a collection site:

1. The potential collection site obtains a Retail or Municipal Participation Agreement either on–line or via telephone request;
2. The responsible person completes and mails the participation agreement to the NEMA program manager;
3. The NEMA program manager reviews the participation agreement for completeness, and contacts the prospective collection site for additional information as needed.
4. The NEMA program manager notifies Veolia of the new participant, and sends the new participant a "userID" and "password" to access the web site to order the free collection containers.
5. The collection site manager signs in on line and orders the number of collection containers desired.

When the collection site is ready to ship full containers for recycling, they contact FedEx for free pick-up and transportation. FedEx delivers the containers to Veolia for recycling. NEMA pays Veolia for their services, and invoices the responsible manufacturers for program costs.

Throughout 2011 and 2012, NEMA and the Department conducted outreach efforts to encourage collection site sign-ups. Retailers that had participated in the Efficiency Maine program were the first to sign up to ensure they were able to offer continuous free recycling of CFLs to their customers. Municipalities began signing up for the program later in 2011, waiting until NEMA revised its original "Municipal Participation Agreement" to be consistent with Maine law limiting municipal liability. By the end of 2011, a total of 149 retail and municipal sites had signed up to participate. This number increased to 116 municipal sites (serving 299 towns) and 134 retail locations by early 2013 (see Appendix C).

The Department continues work to identify manufacturers that are subject to the law. This work involves coordination with other states that have product stewardship requirements, constant review of the marketing of lamps, and research to determine whether a manufacturer's lamps have been sold into Maine. To date, this work resulted in 26 manufacturers participating at the inception of the NEMA program, and four additional manufacturers subsequently joining.

V. Recommended Program Modifications for 2013

The Department is not recommending any statutory changes to the program at this time. Operationally, NEMA is planning the following adjustment in program implementation for 2013:

- Expand collection sites in the eastern part of the state;
- Develop an outreach program for the less active collection sites; and
- Implement a 2013 advertising campaign to continue to encourage Maine consumers to recycle.

The Department will continue to coordinate its outreach efforts with NEMA. This includes targeting field visits to recruit more collection sites in underserved areas and to offer technical assistance to less active collection sites as identified by NEMA. The Department also will:

- Evaluate collection site locations in comparison to Maine's regional service center communities and recruit additional collection sites as needed to ensure service in these areas;
- Maintain the searchable map of Maine on its "Help ME Recycle"[2] web page to help consumers find nearby mercury-added lamp recycling collection sites;
- Provide information on the program through speaking engagements and booths at special events like the Maine Resource Recovery Association annual conference;
- Distribute "Reduce, Relight, Recycle" bookmarks to libraries throughout Maine;
- Provide training to solid waste facility managers and operational staff in Universal Waste management; and
- Identify local outreach opportunities for NEMA, such as the coordinating work done in 2012 with the Maine Waste Water Control Association which offered NEMA the opportunity to publish an article in their newsletter.

Appendix A
Mercury-added Lamp Law Recycling Program Provisions

38 MRSA §1672. MERCURY-ADDED LAMPS (Excerpt)

4. Manufacturer recycling programs for household mercury-added lamps. Effective January 1, 2011, each manufacturer of mercury-added lamps sold or distributed for household use in the State on or after January 1, 2001 shall individually or collectively implement a department-approved program for the recycling of mercury-added lamps from households.

A. The recycling program required under this subsection must include:

(1) Convenient collection locations located throughout the State where residents can drop off their household lamps without cost, including but not limited to municipal collection sites and participating retail establishments;

(2) Handling and recycling equipment and practices in compliance with the universal waste rules adopted pursuant to section 1319-O, subsection 1, paragraph F, with subsection 6 if a crushing device is used and with all other applicable requirements;

(3) Effective education and outreach, including, but not limited to, point-of-purchase signs and other materials provided to retail establishments without cost; and

(4) An annual report to the department on the number of mercury-added lamps recycled under the manufacturer's program, the estimated percentage of mercury-added lamps available for recycling that were recycled under the program and the methodology for estimating the number of mercury-added lamps available for recycling, an evaluation of the effectiveness of the recycling program, recommendations for increasing the number of lamps recycled under the recycling program and an accounting of the costs associated with administering and implementing the recycling program.

B. A manufacturer required to implement a recycling program under this subsection shall submit its proposed recycling program for department review and approval. The department shall solicit public comment on the proposed program before approving or denying the program.

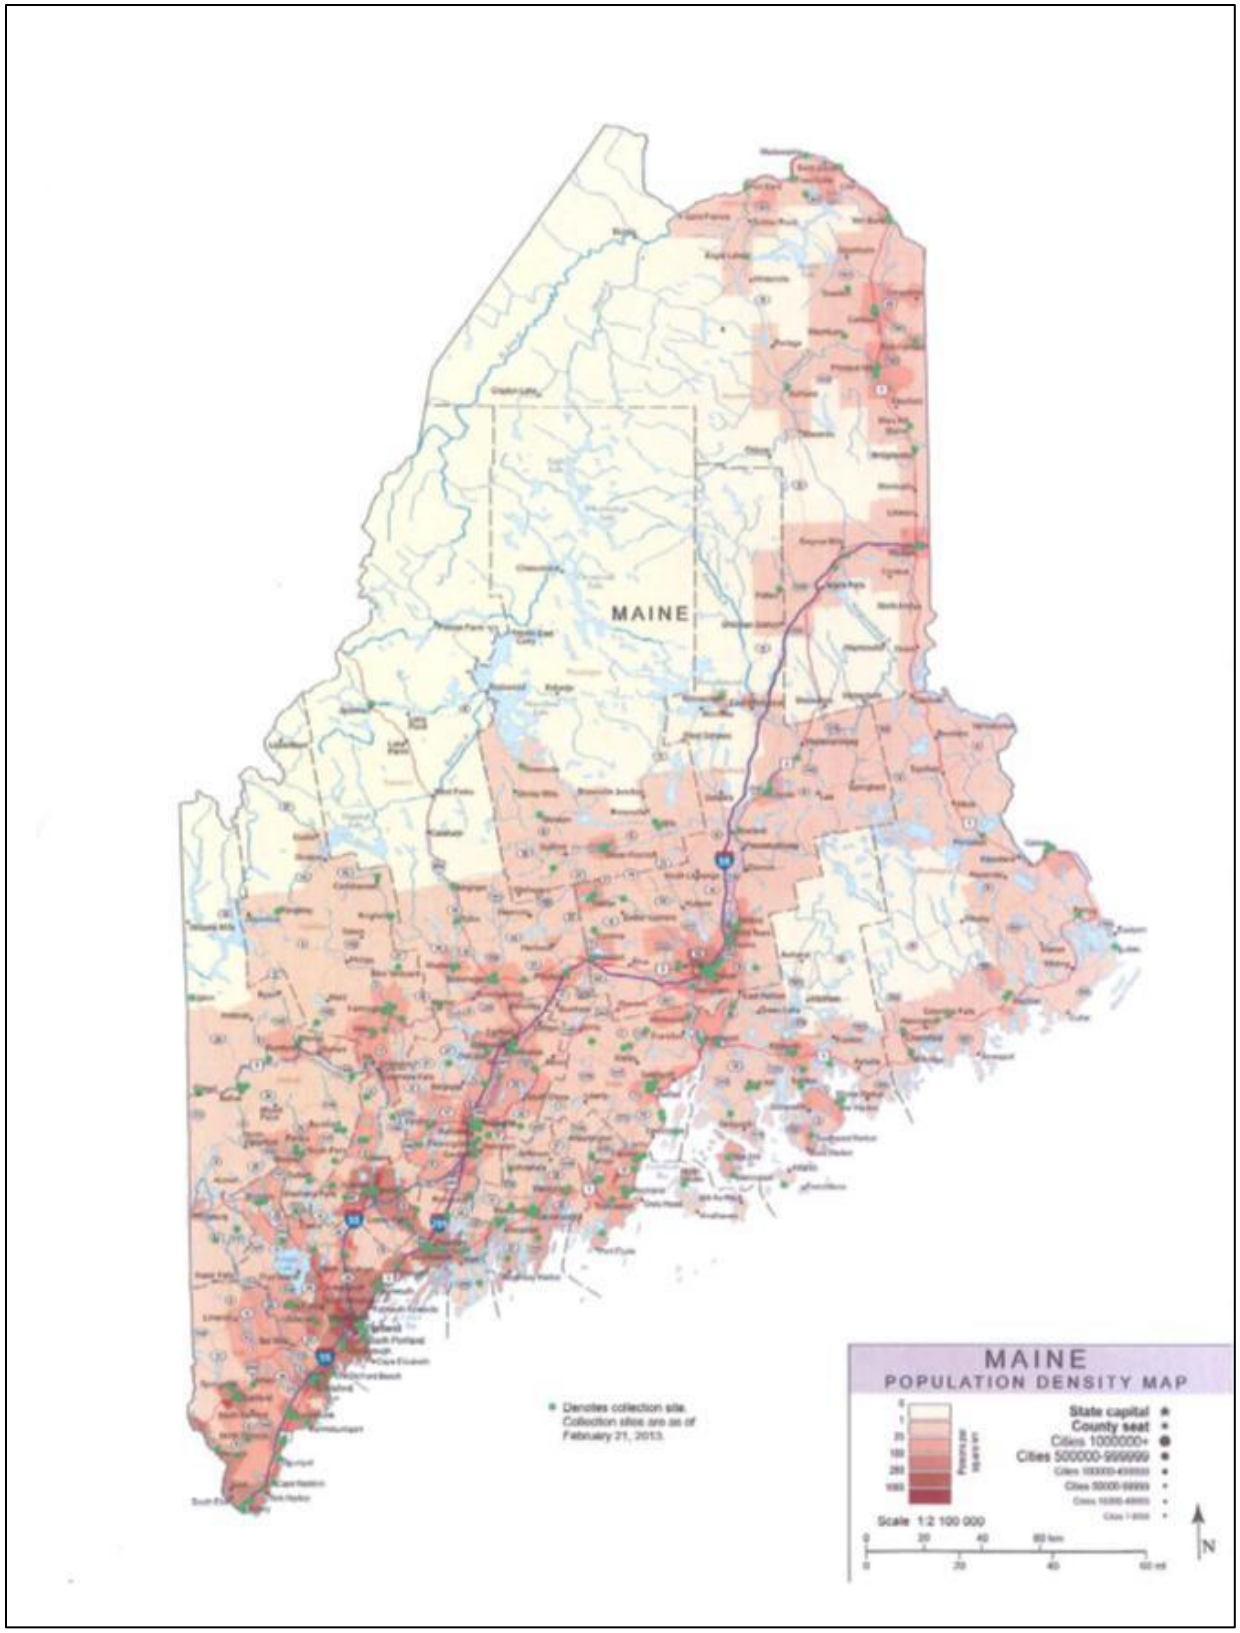

C. Beginning April 1, 2011, a manufacturer not in compliance with this section is prohibited from offering any mercury-added lamp for final sale in the State or distributing any mercury-added lamp in the State. A manufacturer not in compliance with this section shall provide support to retailers to ensure the manufacturer's mercury-added lamps are not offered for sale, sold at final sale or distributed in the State.

D. Beginning April 1, 2011, a retailer may not offer for final sale a mercury-added lamp produced by a manufacturer not in compliance with this section. The department shall notify retailers of the manufacturers of mercury-added lamps not in compliance with this section.

E. Beginning April 15, 2013, and biennially thereafter, the department shall calculate the percentage of mercury-added lamps recycled from households and report to the joint standing committee of the Legislature having jurisdiction over natural resources matters on any modifications to the manufacturer recycling programs it intends to make to improve mercury-added lamp recycling rates and any recommendations for statutory changes needed to facilitate mercury-added lamp collection and recycling.

F. The department may determine that a manufacturer's recycling program is in compliance with paragraph A, subparagraphs (1), (2) and (4) for the collection of compact fluorescent lamps from households if the manufacturer provides adequate financial support for the collection and recycling of such lamps to municipalities and a conservation program established pursuant to Title 35-A, section 10110 and implemented by the Efficiency Maine Trust.

Order Recycling Containers for Municipal Collection Locations

Select the quantity of recycling containers for household mercury-added lamps that you need below. All costs are charged to the National Electrical Manufacturers Association (NEMA). As required by Maine law, manufacturers are offering recycling containers, transport, and processing of waste mercury-added lamps from households at no-cost to eligible municipal and retail collection points. The National Electrical Manufacturers Association (NEMA) is your point of contact for this program on behalf of lamp manufacturers.

Choose the Waste Type You Want to Recycle
